TECH TYCOON DIGITAL SOLUTIONS

Render Staging Deployment & Configuration Runbook

Razorpay Central Webhook Proxy (v2.1) — Staging Isolation Procedure

Repository: `https://github.com/tetycoon/camp-fire-glow` **Active Branch:** `main`

Deployed Commit: `9791dce` **Entry Point:** `backend/webhook_proxy/server.js`

1 Create the Render Web Service

Log in to the **Render Dashboard** (`dashboard.render.com`), select **New +** → **Web Service**, connect `tetycoon/camp-fire-glow` , and configure:

Setting	Configuration Value	Notes / Verification
Name	`techtycoon-proxy-staging`	Identifies the isolated staging container.
Region	Singapore / Mumbai	Low latency to Indian and APAC endpoints.
Branch	`main`	Contains verified commit `9791dce` .
Root Directory	*(Leave blank)*	Runs from repository root.
Runtime	`Node`	Uses Node.js standard runtime.
Build Command	*(Leave empty)*	Zero external dependencies; no build needed.
Start Command	`node backend/webhook_proxy/server.js`	Native ES module entry point.
Health Check Path	`/health`	Under *Advanced Settings*.

2 Configure Staging Environment Variables

> **CRITICAL SECURITY GATE:** Do NOT enter live Razorpay secrets (`rzp_live_*`) or configure production Google Apps Script URLs. Staging strictly rejects live credentials and fails closed.

Variable Name	Setting / Target Value	Security & Fail-Closed Rule
`APP_ENVIRONMENT`	`staging`	Strictly enforces test-mode validation and blocks live payments.
`RAZORPAY_WEBHOOK_SECRET`	*[Your Razorpay Test Webhook Secret]*	From Razorpay Dashboard (Test Mode → Webhooks).
`RAZORPAY_WEBHOOK_SECRET_INTL`	*[Optional: Foreign Account Test Secret]*	Dedicated secret for international test transactions.
`WEBHOOK_PROXY_SECRET`	*[High-Entropy Staging Secret]*	Must match `WEBHOOK_PROXY_SECRET` in Staging Apps Script.

Variable Name	Setting / Target Value	Security & Fail-Closed Rule
`ADMIN_API_SECRET`	*[Random 32-character token]*	Protects `/admin/dlq` and `/admin/reconcile` endpoints.
`APPS_SCRIPT_URL_CLAUDE_MASTERCLASS`	`https://script.google.com/macros/s/AKfycbxTAp0-1C5JCkNfdgDVRZhrWMngKuvTxvoVUdSRpJxcyWBKPdDf583l9PUU4Sv8UoQU/exec`	Staging Apps Script Endpoint
`APPS_SCRIPT_URL_ACADEMY`	`https://script.google.com/macros/s/AKfycbxTAp0-1C5JCkNfdgDVRZhrWMngKuvTxvoVUdSRpJxcyWBKPdDf583l9PUU4Sv8UoQU/exec`	Staging Apps Script Endpoint
`APPS_SCRIPT_URL_ADVANCED_MASTERCLASS`	`https://script.google.com/macros/s/AKfycbxTAp0-1C5JCkNfdgDVRZhrWMngKuvTxvoVUdSRpJxcyWBKPdDf583l9PUU4Sv8UoQU/exec`	Staging Apps Script Endpoint
`APPS_SCRIPT_URL_AI_BGM`	`https://script.google.com/macros/s/AKfycbxTAp0-1C5JCkNfdgDVRZhrWMngKuvTxvoVUdSRpJxcyWBKPdDf583l9PUU4Sv8UoQU/exec`	Staging Apps Script Endpoint
`APPS_SCRIPT_URL_AI_MASTERCLASS`	`https://script.google.com/macros/s/AKfycbxTAp0-1C5JCkNfdgDVRZhrWMngKuvTxvoVUdSRpJxcyWBKPdDf583l9PUU4Sv8UoQU/exec`	Staging Apps Script Endpoint
`APPS_SCRIPT_URL_CONSULTING`	`https://script.google.com/macros/s/AKfycbxTAp0-1C5JCkNfdgDVRZhrWMngKuvTxvoVUdSRpJxcyWBKPdDf583l9PUU4Sv8UoQU/exec`	Staging Apps Script Endpoint
`APPS_SCRIPT_URL_PROFESSIONALS`	`https://script.google.com/macros/s/AKfycbxTAp0-1C5JCkNfdgDVRZhrWMngKuvTxvoVUdSRpJxcyWBKPdDf583l9PUU4Sv8UoQU/exec`	Staging Apps Script Endpoint
`APPS_SCRIPT_URL_UPSCALE`	`https://script.google.com/macros/s/AKfycbxTAp0-1C5JCkNfdgDVRZhrWMngKuvTxvoVUdSRpJxcyWBKPdDf583l9PUU4Sv8UoQU/exec`	Staging Apps Script Endpoint

3 Verification & Health Probe

Once Render reports **Live**, execute the following probe in your terminal:

```
curl -i https://techtycoon-proxy-staging.onrender.com/health
```

Expected Authoritative Response (HTTP 200 OK):

```
{
  "status": "HEALTHY",
  "service": "techtycoon-razorpay-proxy",
  "protocol_version": "v2.1",
  "environment": "staging",
  "uptime_seconds": 15,
  "timestamp": "2026-10-21T13:15:00.000Z",
  "registered_routes": [
    "upscale",
    "advanced_masterclass",
    "ai_bgm",
    "claude_masterclass",
    "academy",
```

```
    "consulting",
    "professionals",
    "ai_masterclass"
  ]
}
```

> **Post-Deployment Status:** After confirming the `/health` response, share the JSON output. The staging pipeline is completely isolated from live payments and ready for webhook testing.
